

Document 14: Unified Framework Runbook (Single-Page Reference)

A vertical, no-left-right-scroll "operating manual" that consolidates everything: tiers, precedence, gates, scoring modules (S2–S6), enhancements, coherence, and final execute/wait/block output. This is meant to be your day-to-day checklist + automation blueprint.

0) What This Runbook Produces (Final Output)

Every scan ends with **ONE** of these:

-  **EXECUTE** (trade allowed; Tier 5 selects vehicle/strategy)
-  **WAIT** (conditions not met yet; set alerts; no entry now)
-  **BLOCK** (hard stop; skip; log reason)

1) Absolute Precedence Order (Never change)

P0 → P5 is the immutable evaluation order:

1. P0: Data Integrity
2. P1: Tier 1 Gates (Market → Sector → Stock → Event)
3. P2: Tier 2 Core (S2–S6 scoring)
4. P3: Tier 3 Enhancements (MTAL, RSI Div, ROC, Peers, S7)
5. P4: Tier 4 Coherence (alignment + conflict resolution)
6. P5: Tier 5 Strategy Selector (Cash/Options + IVP mapping)

Rule: No lower tier can override a higher-tier block.

2) Hard Blocks (Immediate NO TRADE)

If any of these trigger, stop evaluation:

HB-1: Tier 1 Gate = BLOCK

- Market hostile / sector broken / stock illiquid / event risk blocks

HB-2: $S5 = 0$

- Structure not confirmed → invalid

HB-3: $S3 < 0$

- Negative FVG quality → invalidation

HB-4: Tier 4 = INCOHERENT

- Conflicts too strong → reject

3) Soft Gates / WAIT Rules (Not a block, but “not yet”)

SG-1: S4 Unswept Liquidity

- Liquidity visible but not taken → **WAIT**
- Upgrade only when sweep + reclaim completes (or continuation is proven clean—rare exception)

SG-2: S5 weak (1–3)

- Allowed only if **S2 strong + S4 strong** (and ideally S6 supportive)
- Otherwise **WAIT**

SG-3: Tier 1 = **WAIT** (Market/Sector/Event)

- Environment not ready → **WAIT** with explicit upgrade conditions

4) Stage-by-Stage Operating Checklist (Daily Use)

Stage A — P0: Data Integrity

✓ Must have:

- OHLC + Volume
- Delivery fields where applicable (delivery qty/%, etc.)
- Trades/value if you're using microstructure in S6 (optional but helpful)

Output:

- PASS (High confidence)
- PASS (Medium confidence if non-critical fields missing)
- BLOCK (if critical fields missing/corrupt)

Stage B — P1: Tier 1 Gates (Market → Sector → Stock → Event)

Gate G2: Market Regime (Index context)

- PASS: Index near HTF demand/supply OR clean trend
- WAIT: Mid-range chop / mixed HTF-LTF signals
- BLOCK: Index in opposing HTF zone vs your direction or shock regime

Gate G3: Market Structure (Index sweep + structure)

- PASS: Sweep completed + structure shift/confirmation
- WAIT: Liquidity visible but unswept
- BLOCK: Failed BOS / breakdown against intended direction

Gate G4: Sector Regime

- PASS: Sector aligned + peers supportive
- WAIT: Sector consolidating / mixed peers
- BLOCK: Sector broken / in opposing HTF zone

Gate G5: Stock Eligibility

- PASS: Liquid, tradable, ideally Nifty100 universe
- WAIT: Great name but extended far from zones (prefer pullback)

Gate G6: Event Calendar

- PASS: No major event window
- WAIT: Moderate event day or approaching uncertainty
- BLOCK: High-risk earnings/RBI (today/tomorrow) unless your policy allows defined-risk exception

 If all Tier 1 gates PASS → proceed to Tier 2 scoring

 If any WAIT → stop, send "conditional alert"

 If any BLOCK → stop, log reason

5) Stage C — P2: Tier 2 Core Scoring (S2–S6)

Tier 2 answers: "Is this a real institutional swing setup?"

✓ S2 — OB / Demand-Supply Zone (Max 12)

Role: Context anchor (HTF zones)

Key biases:

- Monthly > Weekly > Daily (higher TF more reliable)
- Displacement strength matters
- Freshness matters (first touch best)
- Nesting (Monthly+Weekly) is sniper-grade

Output: Score 0–12 + Grade (A+/A/B/C)

✓ S3 — FVG Precision Entry (Max 8; can be negative)

Role: Entry refinement, NOT a gate

Rules:

- Ignore standalone tiny/noisy FVGs
 - Prefer FVG inside/near S2 zone
 - Freshness matters
 - If $S3 < 0$ → hard invalidation
-

✓ S4 — Liquidity Sweep / Stop Hunt (Max 11) (*Semi-gate*)

Role: Confirms stop-run + reversal probability

Rules:

- Liquidity identification + sweep + reclaim
- Sweep depth + speed of return
- Inducement check
- Unswept liquidity → WAIT
- Deeper/longer sweep → faster reversal (your rule)

✓ S5 — BOS & CHoCH (Max 10) (*Hard gate inside Tier 2*)

Role: Final structural validation

Rules:

- CHoCH = intent
- BOS = commitment
- Retest holds = quality
- MTF coherence matters
- **S5=0 → BLOCK**
- **S5 1–3 → soft gate (needs strong S2+S4)**
- LTF BOS after sweep = institutional entry model
- Failed BOS = exit signal

✓ S6 — Volume & Delivery Institutional Fingerprint (Max 15)

Role: Detects real money participation vs retail churn

Mandatory: Block/Bulk deal volume pre-filter where available

Components:

- C1 Volume vs multi-TF averages (1W/1M/3M/6M; max 3)
- C2 Delivery confirmation (max 3)
- C3 Pattern classification (dry-up/climax/pullback; max 2)
- C4 ROC (Delivery ROC weighted higher; max 3)
- C5 Institutional microstructure (Avg Trade Size + Trade Count divergence; max 4)

Tier bands:

- 13–15 Whale Confirmed
- 10–12 Strong Institutional
- 7–9 Moderate
- 4–6 Weak/Retail
- 0–3 Hollow
- Negative = Trap risk

6) Stage D — P3: Tier 3 Enhancements (Add/Subtract Conviction)

Enhancements **support** the decision but never override hard blocks.

E1 MTAL (MTF Alignment)

- Conflicts reduce conviction; alignment boosts confidence.

E2 RSI Divergence (Conditional)

- Use mainly at weekly OB/OS zones (validated approach)
- Outside zones: ignore

E3 ROC Layer (Momentum acceleration)

- Cross TF ROC improvement supports continuation/reversal strength.

E4 Peer Convergence (Sector/peers)

- Institutional money moves in clusters; peer alignment adds confidence.

S7 FII/FPI Momentum (Contextual)

- Use net + gross + rotation logic
- Do NOT interpret net buy as next-day bullish guarantee
- Consolidation accumulation thesis: FIIs can hide accumulation in ranges

7) Stage E — P4: Tier 4 Coherence (Alignment Engine)

Tier 4 checks 6 pillars:

1. Directional agreement (S2/S4/S5/S6 + MTAL)
2. Sequence integrity (S2 → S4 → S5 → S3 → S6 narrative)
3. Location validity (signals happening at correct zones)
4. Participation integrity (S6 matches the story)
5. Environment confirmation (peers/sector/ROC/S7 support)
6. Red flags (S3 negative, failed BOS, S6 climax distribution, unswept liquidity)

Tier 4 Output:

-  COHERENT → allowed
-  PARTIAL → WAIT + conditions
-  INCOHERENT → BLOCK

8) Stage F — P5: Strategy Selector (Cash/Options + IVP)

Only executes if Tier 4 is **COHERENT**.

Strategy mapping by IVP + conviction:

- **High conviction + Low IVP** → Long premium / Debit spreads (calls/puts/spreads)
- **High conviction + High IVP** → Credit spreads (bull put / bear call spreads)
- **Medium conviction** → Prefer cash or defined-risk spreads
- **PARTIAL** → no execution, only conditional alert

✅ Your constraint maintained:

- No hardcoded SL/entry/exit/position sizing (manual control)

9) Final Decision Rules (Single Box Summary)

EXECUTE if:

- Tier 1 PASS
- $S5 \geq 4$ (or 1–3 with strong S2+S4 confluence)
- S4 not in unswept-liquidity WAIT
- S3 not negative
- Tier 4 COHERENT
- No major S6 trap signature

WAIT if:

- Any Tier 1 WAIT
- S4 unswept liquidity
- S5 1–3 without strong S2+S4 backup
- Tier 4 PARTIAL
- Event approaching and structure not fully confirmed

✗ BLOCK if:

- Any Tier 1 BLOCK
- $S5 = 0$
- $S3 < 0$
- Tier 4 INCOHERENT

10) Telegram Alert Template (Clean + Auditable)

{STOCK} | {BULLISH/BEARISH}

State: {EXECUTE / WAIT / BLOCK}

Tier1: {PASS/WAIT/BLOCK} | Reason: {one-line}

Core Score Summary:

- S2: {x/12} | S4: {x/11} | S5: {x/10} | S3: {x/8} | S6: {x/15}

Key Drivers:

1) {Driver 1}

2) {Driver 2}

3) {Driver 3}

Enhancements:

- MTAL: {+/-} | Peers: {+/-} | ROC: {+/-} | RSI: {+/-} | S7: {+/-}

Coherence: {COHERENT/PARTIAL/INCOHERENT}

IVP: {value if available}

Tier5 Plan (if EXECUTE):

- Vehicle: {Cash/Options}

- Strategy: {Call/Put/Spread name}

Notes: {Event risk / trap flags}

If WAIT -> Conditions:

- {Condition 1}

- {Condition 2}

11) Google Sheet Log Columns (Suggested)

     Plain Text

12) What You Now Have (Document Set Completion)

You now have:

- ☒ Architecture (Doc 1)
- ☒ S2–S6 full logic/scoring (Docs 2–6)
- ☒ S7 (Doc 7)
- ☒ Tier 3 enhancements (Doc 8)
- ☒ Tier 4 coherence (Doc 9)
- ☒ Tier 5 strategy selector (Doc 10)
- ☒ Tier 1 gates + event gate (Doc 11)
- ☒ Unified precedence (Doc 12)
- ☒ Market→Sector→Stock decision tree (Doc 13)
- ☒ **This consolidated runbook** (Doc 14)
